CRC Products

CRC THROW METER

Of all the different tools, gadgets, and devices available for measuring the amount of throw on control surfaces, the **CRC Throw Meter** is the one to use. Why? Because it really works.

Easy to use! See exactly what you need to know by noting the position of the pointer.

Attaches to control surface without marring, and holds still to give you a truly accurate reading, even at the flying field where conditions may not be ideal.

Requires no batteries. Always ready, no assembly required.

With two of them, you can put one on each elevator half, and check for differential, without moving the meter back and forth, or one on each aileron, to check both at the same time.
